The DJIL'OR production factory

The DJIL'OR team has begun to implement its commercial strategy. This strategy is based mainly on women's E.I.Gs, supermarkets and a direct marketing network (DJIL'OR shops and kiosks).

DJIL'OR refined peanut oil, being a product that is beginning to be prized on the market, must be available in large quantities because of the strong future demand. The FIMELA/DJILOR socio-industrial centre has therefore decided to increase its refining capacity from 5,000 litres per day to 12,000 litres per day.

The new refining machines will be added to the plant in May 2023.

The DJIL'OR company

After structuring, developing and executing the project for the production and refining of edible and cosmetic oils in FIMELA/DJILOR, LSF Capital handed over DJIL'OR to its clients, who thus hold 100% of the company's capital. DJIL'OR was also created within the framework of a project to set up an investment vehicle called EEMAN for private equity funds operating in West Africa. DJIL'OR's business model should, in the next few years, generate a level of profitability that will enable it to feed the project pipeline of the EEMAN investment vehicle.

EEMAN investment vehicle

LSF Capital has started the structuring of an investment vehicle, EEMAN, with a target size of XOF 30 billion. EEMAN will be an investment vehicle that will allow private investors and more specifically investment funds operating in the UEMOA/ECOWAS zones to indirectly take stakes in agro-industrial companies and projects structured by LSF Capital.

The establishment of an industrial ecosystem around agricultural commodities will be the main investment theme of this vehicle. Like the first DJIL'OR project, LSF Capital, as a financial engineering company, will structure, develop and implement about ten agro-industrial projects that will constitute the EEMAN fund's pipeline.
