Our EEMAN investment vehicle project

As previously mentioned, LSF Capital's investment team is working on the information memorandum for the EEMAN investment vehicle, aimed at private investors with a pan-African vision and wishing to capitalize on the opportunities in terms of return on investment offered by the creation of an industrial ecosystem around agricultural commodities.

The DJIL'OR project (production and refining of cooking oils and cosmetics) was conceived, structured, developed and implemented by the LSF Capital team to become the "Showcase Project" of the EEMAN fund's project portfolio.

Our team is currently expanding the EEMAN fund's dealflow with eleven (11) other projects, all aimed at setting up small and medium-sized industries able to process agricultural commodities locally and offer consumers high-quality 100% natural agri-food products.

Management contract between LSF Capital and DJIL'OR

Following the EEMAN fund's investment strategy, DJIL'OR's shareholders entrusted LSF Capital with the company's management mission. DJIL'OR currently operates in the production, refining and marketing of 100% natural refined peanut oil. Our team is working on a large-scale marketing strategy for this oil.

To achieve this goal, DJIL'OR's 100% natural refined peanut oil aims to position itself both as a national pride and as a quality product contributing to the mastery of our food value chains.
